Objective: $953, 322, 418, 079; without intervention: $1, 003, 571, 304, 682 (Desired optimality gap: 1%; actual: 2%. Lower Bound: $934,880,000,000. Time to solve: 285s)
$C^I = \$10,000, C^D = \$10,000,000$. Zero switching costs.
One Period=7 days (costs scaled by 1, 000, 000 during optimization)
Solved using solve_and_process_lagrangian_use_smart_stepsize_True
